Project Title: N/A

Time Log From 1/28/2024-2/4/2024

Date	Duration	Type	Description of completed work	Challenges and/or next steps
1/28	2 hours	Other	Reviewed the 4900 documents	
1/29	2 hours	Research	Explored possible projects either with people or a solo project	Look at sample projects for inspiration
1/30	3 hours	Research	Explored possible projects either with people or a solo project	
1/31	2 hours	Research	Researching some possible machine learning projects	Get in touch with a professor who teaches or specializes in machine learning
2/1	2 hours	Research	Focusing on researching possible health-related machine-learning topics	
2/2	1 hour	Research	Very light research and discovery about what segmentation is in machine learning	
2/3	3 hours	Research	Look into possible image segmentation projects relating to the heart, brain, or other common scanned body parts/organs	

This Week's Reflection

This week I did a good amount of reading both for the class and for my project. I've realized trying to come up with a project to do for a semester is extremely hard and requires me to call on both my academic, social, and technical skills.

Reading and looking more into potential projects has caused me to question my passions and close doors temporarily on things I've been learning on the side. As I was looking for potential projects, at some point I decided to start researching potential machine learning projects and found a lot of questions and ongoing things that I want to contribute to.
